Mold-Tech Inc Adds In-House Mold Tryout Capabilities

Albertville, Minnesota- Mold-Tech Inc has added mold sampling equipment to its manufacturing plant in Albertville, MN. The purchase of a new Toshiba 110 all-electric molding machine allows molds to be fully tested and validated before shipment.

The implementation of this new press coupled with RJGSM eDARTTM Process Monitoring, Control, and Analysis Systems, strengthens Mold-Tech's strategy of being a full-service provider, and not simply a mold builder. In addition to providing more control in manufacturing, the press shortens mold qualification times and decreases transportation costs. Mold Sampling is one more benefit on a long list of advantages customers find when working with Mold-Tech Inc, such as dedicated project management, extensive technical and engineering expertise, and an ISO 9001 certified tool shop.
